

Juan Idarraga

Data Scientist

Data Scientist junior with 1+ year building predictive models and data-driven solutions for decision-making in high-pressure, dynamic environments. I design and deploy classification and regression models (scikit-learn, XGBoost, decision trees, random forests) that optimize operations and drive strategic outcomes. Proficient with the Python data stack (pandas, NumPy, matplotlib, seaborn, statsmodels, scipy), I transform complex datasets into actionable insights through exploratory data analysis and statistical modeling. I develop end-to-end pipelines using Jupyter notebooks—from data preprocessing and feature engineering to model training, validation, and deployment. Experienced in time-sensitive scenarios requiring rapid analysis and automated decision support systems, including anomaly detection, pattern recognition, and real-time monitoring solutions.

Personal Skills

- Critical thinking
- Analytical
- Active listening
- Problem solver
- Empathetic
- Adaptable
- Time management

Languages

- English: Intermedium English (B1)
- Spanish: Native

Experience

Live Trader | Sports data analysis

LeoVegas Group - Colombia - October 2025 - Present

Manage real-time sports betting markets for Football, American Football, Basketball, Handball, Volleyball and Tennis, leveraging live data analysis and predictive models to optimize odds and mitigate risk. Implement automated solutions using Python and machine learning to enhance dynamic pricing accuracy and decision-making under pressure during live sporting events.

- Monitored and adjusted odds in real-time during live sporting events, optimizing margins and managing risk exposure.
- Developed predictive models using Python and machine learning algorithms for pre-match markets, forecasting outcomes and probabilities before events begin.
- Analyzed American sports markets (NFL, NBA, and MLB) through regression and classification techniques to identify patterns and optimize pricing strategies.

US Sports Trader | Sports data analysis

Genius Sports - Colombia - August 2024 - September 2025

Manage real-time sports betting markets for US leagues (NFL, NBA, MLB, NHL), applying advanced quantitative analysis and statistical modeling to optimize odds and maximize profitability. Implement automated trading systems to enhance pricing accuracy and risk management across American sports events.

- Monitored and supervised betting markets in real-time, identifying anomalies and adjusting odds to maintain optimal margins during live events.
- Designed and implemented predictive models based on decision trees for semi-automated modification of player prop markets in the NFL, optimizing dynamic pricing of specialized markets.
- Conducted quantitative analysis of historical sports performance data and betting patterns, identifying abnormal behaviors and key trends to adjust risk management strategies through visualization and exploratory analysis techniques.

Process engineering trainee

Andercol S.A - Colombia - July 2023 - January 2024

Optimize polymerization processes in resin and polymer production plant through operational data analysis and development of automated control systems. Implement data-driven solutions to improve production efficiency, finished product quality, and informed decision-making in chemical manufacturing operations.

- Developed temperature control system for polymerization reactor using PID controllers implemented in Python, optimizing process stability and reducing variability in reaction conditions based on historical data analysis from SCADA systems.
- Designed and implemented anomaly analysis system in Databricks to monitor variations in physicochemical properties of finished products, integrating data from multiple SCADA sources for early deviation detection and proactive process parameter adjustment.
- Conducted continuous monitoring and supervision of plant production operations, analyzing operational performance indicators and generating analytical reports to support process engineering decision-making.

Education

Master of engineering

Universidad Nacional de Colombia
2024- Present

Bachelor in Science Chemical Engineer

Universidad Nacional de Colombia
Graduation date: April 2024
