

FRANCISCO OCAMPO

Manizales, Colombia | Zip code 170004

Phone: +57 316 8129270 | fnocampo04@gmail.com | LinkedIn: franciscoocampob

PROFILE

Computer Scientist graduated from Universidad Nacional de Colombia, with a focus on Artificial Intelligence and Data Analysis. My experience spans the design and implementation of artificial intelligence, machine learning, and data analytics solutions across diverse contexts, with a current emphasis on credit risk assessment and financial analytics. I have developed projects ranging from decision trees to artificial and convolutional neural networks, building predictive models, large-scale analysis systems, automated pipelines, data-driven decision support tools, and intelligent applications powered by Large Language Models (LLMs). In parallel, I have participated in interdisciplinary projects encompassing areas such as dynamical systems, computational physics, neuroscience, and digital image processing.

EDUCATION

Universidad Nacional de Colombia

PhD in Engineering — Automatic Control | Admitted

Aug 2026 – Aug 2030

- Graduate scholarship awarded for achieving Honors Degree in undergraduate studies

Bachelor's in Computer Science | GPA: 4.6 / 5.0

Aug 2021 – Dec 2025

- Honors Degree in undergraduate studies
- Dean's List across all academic terms (2021-2 through 2025-2)
- PAES Scholarship for academic excellence in secondary education (2021)
- 1st place, Programming Marathon — ExpoASI, Universidad Nacional de Colombia (2024)

WORK EXPERIENCE

Meddipay | Remote

Meddipay is a technology company dedicated to financing health and wellness treatments across Latin America.

Data Scientist

Aug 2023 – Present

- Built and deployed a machine learning model in Python on Azure Cloud to automate credit approval decisions.
- Designed active portfolio projection models and key indicators at macro and micro levels, combining roll rates, vintage analysis, statistical and predictive models to anticipate credit behavior.
- Conducted exploratory analysis and active monitoring of key portfolio variables to identify patterns, anomalies, and improvement opportunities in models and indicators.
- Built interactive Power BI dashboards connected to databases via SQL for monitoring originations, sales tracking, portfolio performance, cohort analysis, and descriptive statistics.
- Automated the generation and delivery of advanced reports in Python and SQL via email for tracking goals, partners, and projections.
- Implemented a multi-agent WhatsApp chatbot on Azure with automatic routing to specialized agents for customer service and support, built on a flexible LLM-interchangeable architecture.
- Developed a PQR and collections call analysis system using LLMs, enabling automatic service quality self-assessment and real-time alert generation.

SKILLS

Programming Languages

Python | SQL | Java | C | R | Matlab

Libraries & Frameworks

Pandas | Numpy | TensorFlow | Scikit-Learn | PyTorch | Keras | XGBoost | SciPy | OpenCV | Streamlit | FastAPI | Plotly | Matplotlib

Tools & Platforms

Power BI | Roboflow | Azure Cloud | OpenRouter | n8n | Git

Areas of Expertise

Predictive Modeling | Computer Vision | LLMs & NLP | Credit Risk | Data Engineering | Data Analysis | Dynamical Systems

Soft Skills

Critical Thinking | Problem Solving | Data-Driven Decision Making | Technical Communication | Adaptability | Interdisciplinary Collaboration | Project Management

Languages

Spanish (native) | English (B2)
