Professional Summary

Business Analyst / Analytics Engineer with 5+ years translating complex business problems into data-driven solutions. Expert at bridging business stakeholders and technical teams to deliver actionable insights. Expert at bridging business stakeholders and technical teams to deliver actionable insights, leveraging technical expertise in SQL, Python, DBT, and BI platforms for end-to-end ownership from requirements gathering to dashboard delivery.

Core Competencies

Business Analysis: Requirements gathering, stakeholder management, business process analysis, KPI definition, user research, solution design, ROI analysis

Analytics Engineering: SQL (advanced), DBT, data modeling, dimensional design, BI development (Looker, Superset, Power BI), Python (Pandas)

Technical Skills: BigQuery, Snowflake, Apache Airflow, data quality frameworks, dashboard architecture, API integrations

Domain Expertise: Retail, Manufacturing, Fintech, Petroleum, Insurance

Professional Experience

Founder & Head of Operations, Space Analytics Aug 2023 – Present

- Led 15+ analytics consulting projects for retail, fintech, manufacturing, petroleum, and insurance clients; translated ambiguous business requirements into structured analytical frameworks and actionable dashboards
- Partnered with C-level executives to identify operational inefficiencies, design KPI frameworks, and implement data-driven decision processes across organizations
- Designed sales performance monitoring system (SAT PCS) with KPI tracking and incentive point structure; built manufacturing operations intelligence and analytics platforms enabling real-time decision-making
- Built ML-based early failure detection system for ESP oil wells (Geopark) using sensor data; enabled operations to schedule proactive workovers minimizing production downtime
- Managed 7-person technical team ensuring delivery of business-aligned solutions; drove cost optimization reducing operational reporting overhead

BI Engineer, Chiper – Bogotá, Colombia Mar 2022 – Jul 2023

- Led churn reduction initiative combining qualitative user research and quantitative analysis; identified technology adoption barriers and recommended intervention strategies that informed product roadmap
- Built 20+ executive dashboards translating complex operational metrics into executive-ready insights; established data governance framework for 50+ business-critical metrics becoming go-to analyst for product, finance, and operations teams
- Optimized reporting infrastructure reducing cloud costs and improving load times 15% on resource-intensive reports

Data Analyst, Makro Supermayorista – Bogotá, Colombia Aug 2021 – Mar 2022

- Optimized promotional campaigns through basket composition analysis, customer segmentation, and timing optimization to improve effectiveness and reduce waste
- Led data culture transformation initiatives across multiple departments; facilitated workshops driving data-driven decision-making adoption throughout organization
- Designed 30+ operational dashboards democratizing data access; led basket prediction project identifying cross-sell opportunities implemented in weekly promotional planning

Data Analyst, Pemser Solutions SAS - Bogotá, Colombia Nov 2020 – Aug 2021

- Established foundational data infrastructure organizing fragmented databases; built ETL pipelines and automated reporting systems translating operational data into business insights

Education

B.S. Industrial Engineering, Universidad de los Andes – Bogotá 2017–2020

Continuous learning with DataCamp, technical documentation, and hands-on implementation of emerging technologies
